Experience a Different Analytical Symposium

We are delighted to invite you to e-MSB 2021. Cutting-edge research in separation sciences, ranging from fundamental developments to applications that impact health, medicine, food, environment and beyond, will be presented through stimulating workshops and short courses, and during talks delivered by distinguished plenary and keynote speakers, as well as by scientists of contributed talks in parallel sessions that cover diverse topics in Microscale Separations and Bioanalysis. The conference program covers aspects related to all major microscale separation techniques including capillary electrophoresis (CE), liquid chromatography (LC), microfluidics, mass spectrometry (MS), CE-MS, Lab-on-a-Chip devices the fundamental aspects of micro- and nanofluidics, microchip fabrication, portable devices, as well as applications related to pharmaceutical sciences, biotechnology, clinical diagnostics, forensic toxicology, omics techniques (proteomics, metabolomics, etc.), food analysis, nanoparticles, industrial chemicals, and more!

MSB-2021 is an exciting forum where researchers from around the world will introduce, promote and discuss the latest innovative and sometimes controversial, but mostly unpublished, scientific research results related to all areas of microscale separations and bioanalysis. Oral presentations are time wise split in 2/3 talk and 1/3 discussion. Abstracts will be reviewed in a double-blind manner.
